Introduction

Adobe Muse CC is a useful tool that allows you to create and publish fixed or fluid websites within a visual (WYSIWYG) interface

This booklet is to help students understand the fundamental processes involved with planning, designing and publishing web pages using Muse CC.

Note to Students: Every student with an active NetID has space on StudentWeb, the KSU student server. If you do not have an active NetID, or have forgotten the password, go to <https://netid.kennesaw.edu> for assistance.

Your web address on StudentWeb is <http://studentweb.kennesaw.edu/~yourNetID>. Do not put *www* before this address.

Note: Do not place any sensitive information on your website, even if there are no direct links to it.

File Naming Conventions

When naming your files to publish to the KSU student or faculty web servers, always use lowercase letters and use underscores (_) in place of spaces. For example, instead of naming a page *"KSU Graduation Rates.html"* it would be best to name it *"ksugraduationrates.html"* or *"ksu_graduation_rates.html"*.

Other best practices include:

- Use shorter names
- Avoid special characters such as question marks, exclamation points, hashtags etc.
- Do not use numbers as the initial character

This is a sample, click download link to get the full Tutorial
